□ EduAssist: Official User Guide

Welcome to **EduAssist**, your institution's AI-powered Learning Management System. This guide will walk you through how to set up your institution, manage courses, and utilize the AI features to enhance teaching and learning.

□ Part 1: Institution Administrators (Admins)

The Admin is the highest-level user. You are responsible for setting up the institution and provisioning the people who will use it.

1.1 Creating Your Institution

1. Go to the EduAssist homepage and click **Register**.
2. At the top of the form, select the **Admin** role.
3. Fill in your name, email, and password.
4. **New Institution Name:** Enter the name of your university or college (e.g., *University of Nairobi*).
5. *Note: The system automatically detects your institution's domain from your email address (e.g., `@uonbi.ac.ke`).*
6. Click **Register**. You will be redirected to the Institution Dashboard.

1.2 Provisioning Faculty

Before lecturers can teach, they must be added to the system. 1. Go to your **Institution Dashboard**. 2. Navigate to **Manage Faculty**. 3. Enter the lecturer's email address and full name. 4. Click **Invite**. *(Note: If Custom SMTP is configured, they will receive an email invite. If not, you may need to provide them with their temporary login credentials manually).*

1.3 Creating Academic Structures

You need to set up the hierarchy so classes can be assigned. 1. Go to **Manage Courses** and click **Create Course** (e.g., *Bachelor of Computer Science*). 2. Within that course, create **Units** (e.g., *Intro to Programming*). 3. Within each unit, create **Classes** (e.g., *Year 1, Semester 1*). 4. Assign a provisioned Faculty member to each specific Class.

□□ Part 2: Faculty / Lecturers

As a lecturer, EduAssist is your teaching assistant. It handles the repetitive questions so you can focus on complex topics.

2.1 Logging In & Viewing Classes

1. Log in using the credentials provided by your Admin.
2. You will see your **Faculty Dashboard**, which lists all the Classes assigned to you.

2.2 Uploading Course Materials

The AI can only answer questions based on the documents *you* provide. 1. Click into your Class and select the **Materials** tab. 2. Click **Upload Material**. 3. You can upload **PDFs**, **Images** (EduAssist will run OCR to read text from images), or paste **Raw Text** directly. 4. Wait for the upload to finish. The system will automatically split the document into chunks and create vector embeddings so the AI can read it. *(Note: Large documents like 400-page PDFs may take up to 90 seconds to process).*

2.3 Using the Manual Quiz Builder

Instead of AI-generated quizzes, EduAssist uses a reliable manual builder. 1. Go to the **Assessments** tab in your class. 2. Click **Create New Quiz**. 3. Type your questions and provide the correct answers. 4. Save the quiz as a **Draft**. 5. Once you are happy with it, click **Publish**. It will immediately become available to students.

2.4 Reviewing Analytics

1. Go to the **Analytics** tab.
2. Here you can see how many students are actively using the AI chat, and download **CSV reports** of quiz results to see which topics the class is struggling with.

□ Part 3: Students

EduAssist is your personalized study buddy. It does not hallucinate; it only gives you answers based on your lecturer's actual notes.

3.1 Joining a Class

1. Register on EduAssist using the **Student** role.
2. You will be asked for your **Institution Domain or Name** (e.g., *uonbi.ac.ke* or *University of Nairobi*). Ask your Admin or Lecturer if you aren't sure.
3. Once registered, you will automatically be enrolled in your classes.

3.2 Chatting with the AI Tutor

1. Go to the **AI Chat** tab inside your class.
2. Ask a question based on the course material (e.g., *"Explain the difference between a list and a tuple"*).
3. The AI will search the lecturer's uploaded documents and generate a response with **citations** showing exactly where the answer came from.

4. If the answer isn't in the materials, the AI will tell you *"Topic not found in materials."*

3.3 Generating Study Notes & Flashcards

1. Inside the AI Chat, select the **Range** (Narrow, Medium, or Broad) depending on how much context you want the AI to use.
2. Type a topic (e.g., *"Data Structures"*).
3. Click **Generate Study Notes** to get a comprehensive summary.
4. Click **Generate Flashcards** to get 8 AI-generated flashcards. You can click through them to test your memory.
5. All generated notes and flashcards are saved to your profile for future revision.

3.4 Taking Quizzes

1. Go to the **Assessments** tab.
2. You will see quizzes published by your lecturer.
3. Click **Start Quiz**, answer the questions, and hit **Submit**. Your score will be saved immediately.

Part 4: Troubleshooting & Known Limits

- **"Institution not found" during registration:** Ensure you are typing the institution's domain correctly (e.g., `techuniversity.ac.ke`) or ask your Admin for the exact name.
- **PDF upload timeouts:** If a PDF is extremely large (400+ pages), the upload might fail due to server timeouts. Try splitting the PDF into smaller chapters.
- **"AI service unavailable":** If you spam the chat feature, you will hit the API rate limit. Wait 1 minute and try again.
- **Email Invites:** If invited users are not receiving emails, the institution Admin must configure Custom SMTP (like Resend or Brevo) in the Supabase backend settings.
